

# Cleaning The Media Library

Go to Media, Library and then click on Unattached. A list of media files that are not attached to any Page or Post are now listed for review. **WARNING** – you should make sure you have a backup before continuing.

You can now review this list, one at a time, and delete the files that you no longer wish to keep in your WordPress directory.

Alternatively, you can delete them all at once by clicking the all checkbox and then choosing the Bulk Action drop down indicating you wish to delete all checked files.
