

Inserting A Link Into A Page

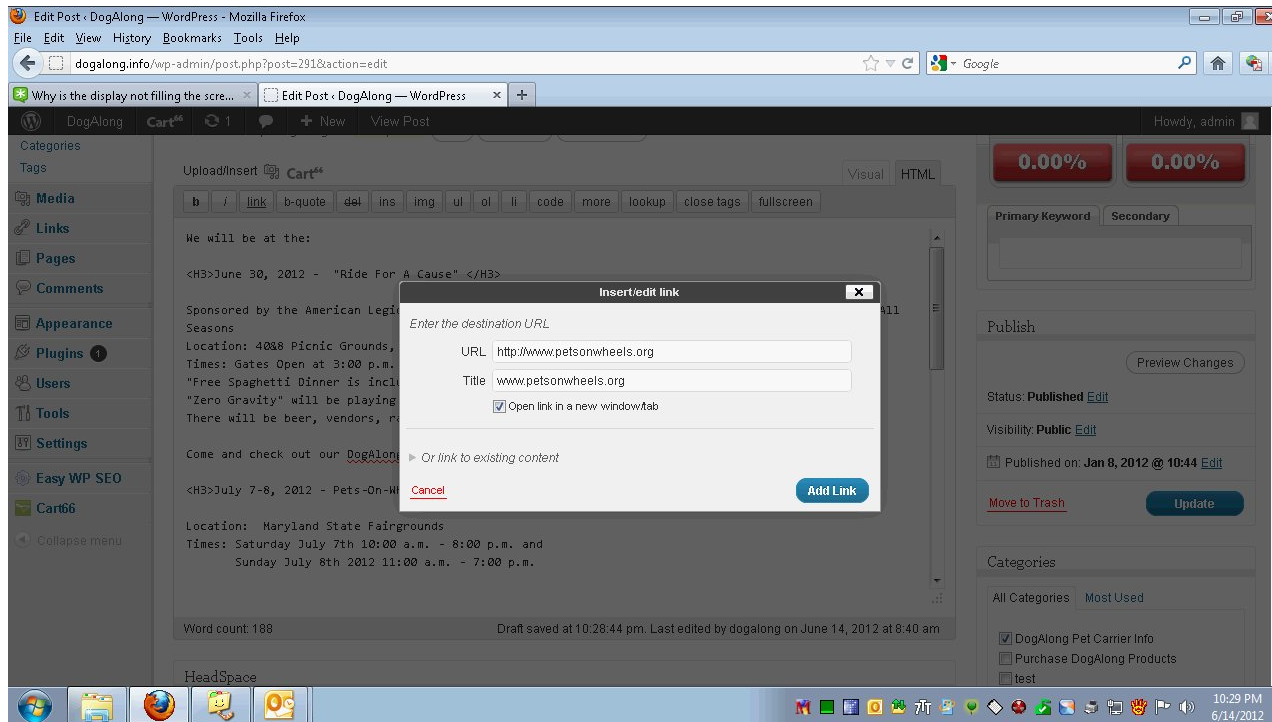

To add a link here, click on the link button here.

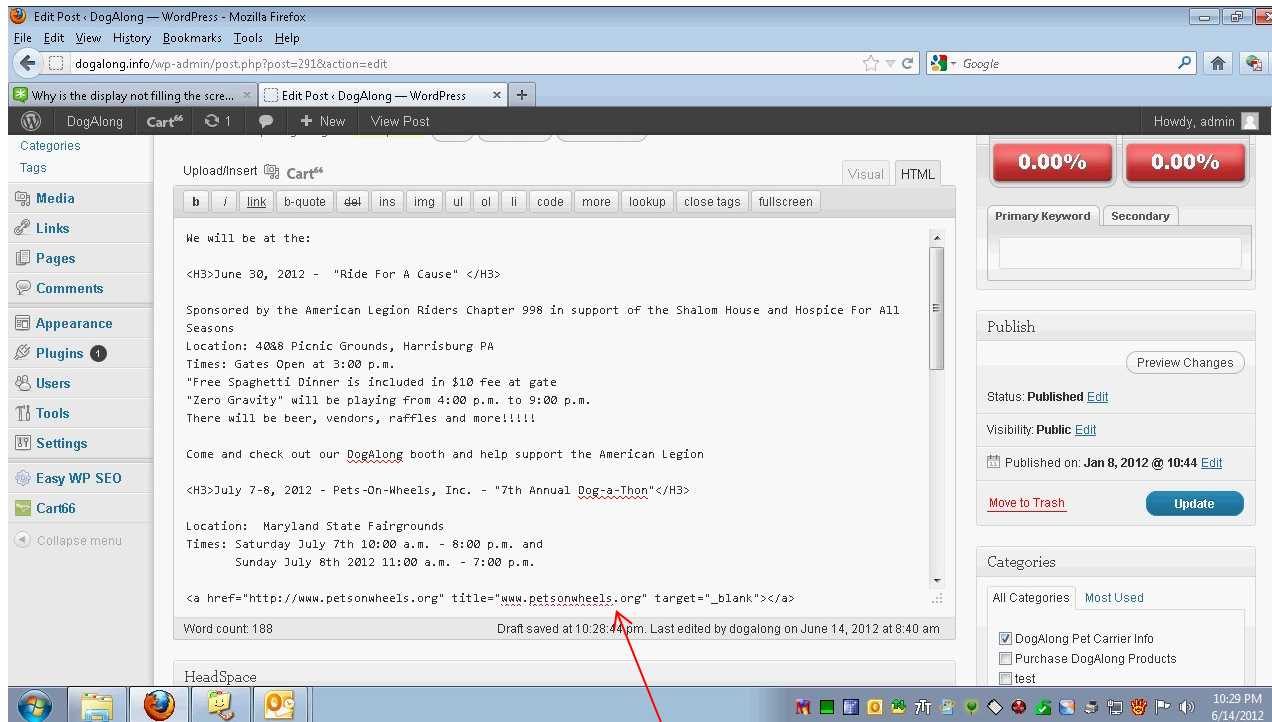

It is a good idea to open the URL in a browser tab and copy the URL to the clipboard.

Please note that this example is presented in HTML rather than Visual mode.

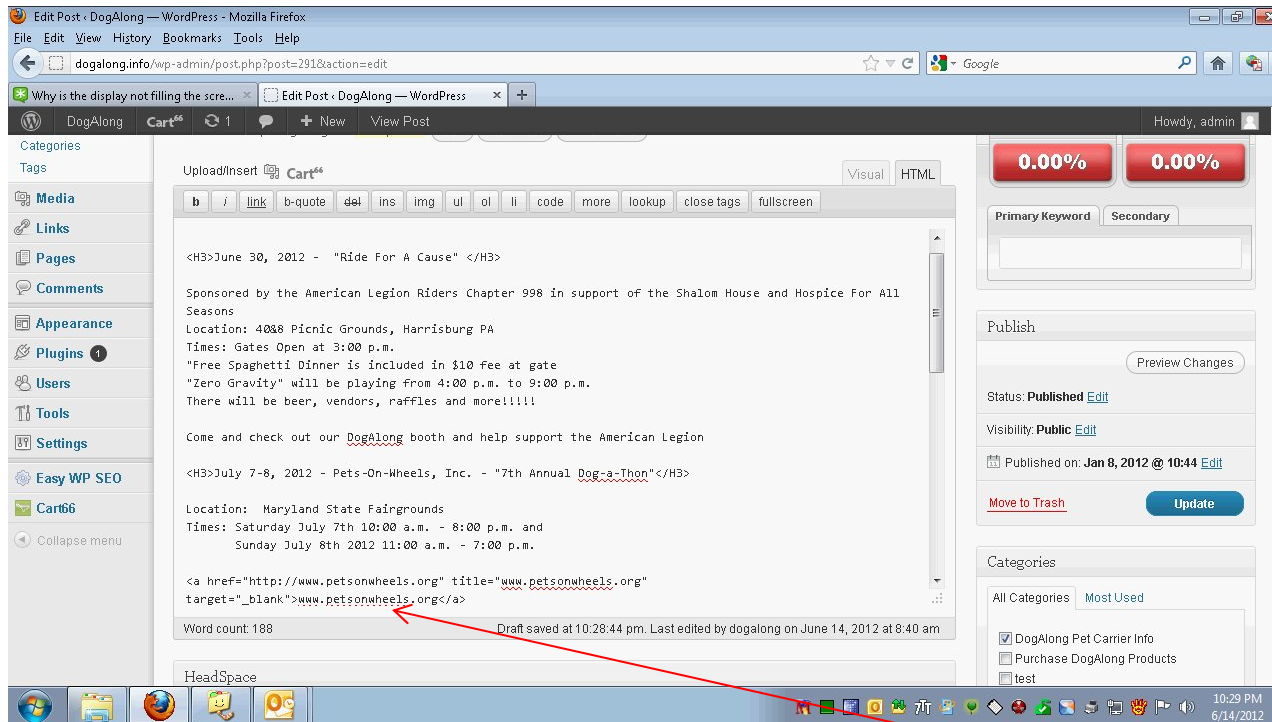

6/14/2012

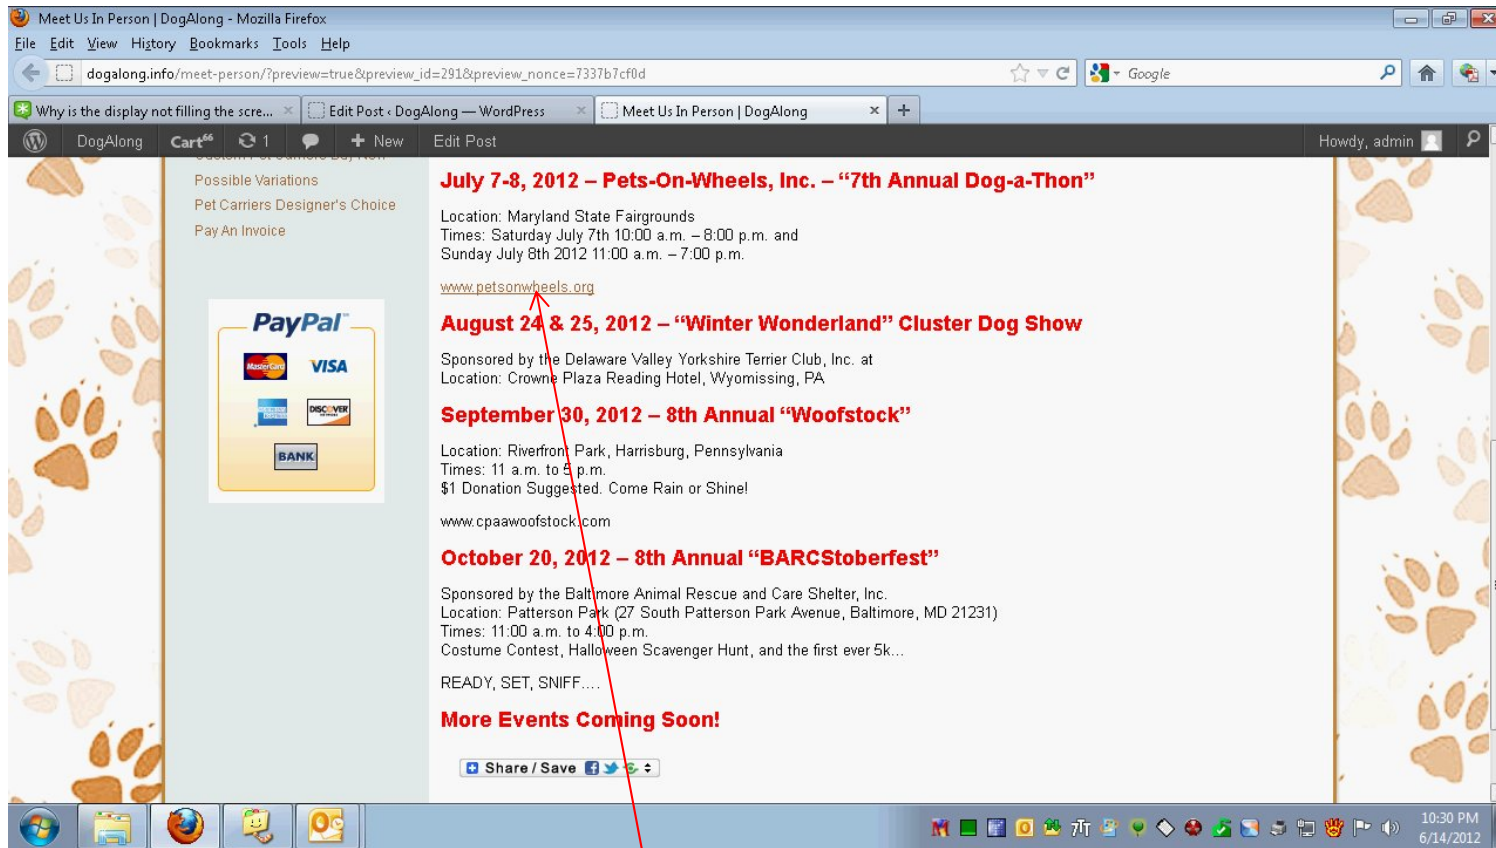

Paste the URL from the clipboard to the URL box. Add a Title which is actually used mostly for SEO and click the checkbox if the link should open in a new tab.

The link has been inserted but is not complete. It will not show on the Preview page at all, as is.

Type the description to be seen on the final page between here. This description can be anything and has no bearing on the functionality of the link.

Finished link as displayed to visitors.
